

GILSON ANNOUNCES THE RELEASE OF PIPETMAN® G – LOWEST PIPETTING FORCE ON THE MARKET

Gilson is proud to announce the release of PIPETMAN® G, the latest and most advanced evolution of the legendary Gilson PIPETMAN®, the world's pipetting standard for over 35 years. PIPETMAN® G is a new mechanical, air-displacement pipette that boasts the lowest pipetting forces on the market. A redesigned piston assembly system makes the PIPETMAN® G ideal for daily pipetting and significantly reduces the risk of Repetitive Strain Injuries (RSI). With minimal forces, PIPETMAN® G takes comfort to the next level with even the most intense pipetting routines.

Offering two tip ejector styles, plastic and stainless steel, PIPETMAN® G is perfect for both corrosive and non-corrosive samples. Both tip ejector styles are equipped with a clip ejector for convenient access to serviceable parts.

PIPETMAN® G is available with a complete volume range from 0.2µL-10mL in eight models. GLP features include a unique, traceable serial number given to each pipette, and a color-coded push-button that corresponds to matching Gilson tip packaging. Like PIPETMAN P, PIPETMAN G is fitted with a universal tip holder ensuring a secure fit for most brands of tips, so there is no need for a dedicated tip brand.

PIPETMAN® G looks, performs, feels like the original PIPETMAN®, and offers the renowned robustness, reliable accuracy and precision expected from a Gilson PIPETMAN®. Within the UK, PIPETMAN® G is exclusively available from Gilson directly and Scientific Laboratory Supplies (SLS), the official Gilson Seal of Assurance partner.

- Gilson in the UK offers complete sales, support and service for all Gilson Pipetman® pipettes and liquid handling products in the UK and Ireland. Visit www.gilsonuk.com or call 0845 5196 872 for more information.
