

Corning® Fluoroblok™ 96 Multiwell Insert System

- A solution for automated, high throughput cell-based studies of chemotaxis, migration and invasion
- One piece insert housing and fluorescence blocking microporous membrane enables increased efficiency, productivity and throughput in the drug discovery process
- Novel receiver plate design minimises crosstalk between the wells; the black housing virtually eliminates autofluorescence
- Increase cell migration and invasion assay productivity with simplified fluorescence detection and real-time analysis
- Simplification of chemotaxis, cell migration, and invasion assays
- Standard technology platform allows multiple protocols
- Homogeneous protocols for real-time kinetic readouts
- Real time detection without dismantling or destroying the insert
- Increased sample throughput
- Eliminates need for manual cell scraping and counting
- Automation friendly
- 96 multiwell format is compatible with commercial detectors and fluid handling instruments
- Unique fluorescence blocking membrane
- Blocks greater than 99% of the excitation and emission wavelengths of fluorophores commonly used to label cell

Code	Description	Pore Size, μm	Pack	Price
351161	FluoroBlok™ HTS 96 well multiwell permeable support system	3	Each	£513.00
351162	FluoroBlok™ HTS 96 well multiwell permeable support system	3	5	£2186.00
351163	FluoroBlok™ HTS 96 well multiwell permeable support system	8	Each	£513.00
351164	FluoroBlok™ HTS 96 well multiwell permeable support system	8	5	£2245.00
353928	96 square well plate and lid for inserts for Fluoroblok™	—	5	£163.00

Corning® Transwell® Permeable Supports

- Transwell® cell culture inserts are convenient, easy-to-use permeable support devices for the study of both anchorage-dependent and anchorage-independent cell lines
- Designed to produce a cell culture environment that closely resembles the *in vivo* state
- Allows polarised cells to feed basolaterally and thereby carry out metabolic activities in a more natural fashion
- Unique patented self-centred hanging design prevents medium wicking between the insert and outer well
- Permits access to the lower compartment through windows in the insert wall
- Suspended design allows for undamaged co-culturing of cells in the lower compartment
- Available in a range of pore sizes and different membranes, polyethylene terephthalate (PET) polycarbonate and collagen coated

Polycarbonate Membrane Inserts

- 10 μm thick translucent membrane
- TC treated for optimal cell attachment
- Supplied in multiple well plates
- Membrane must be stained for cell visibility
- Sterilised by gamma irradiation
