

National Diagnostics AcrylaGel 30%

**national
diagnostics**

A ready to use, 30% acrylamide solution in distilled/deionised water. Because acrylamide in its crystalline form is subject to self-polymerisation, the purity and consistency of polymerised AcrylaGel is superior to that obtainable with powdered acrylamide. AcrylaGel can be crosslinked with Bis-AcrylaGel, a ready to use, 2% solution of methylene bisacrylamide with the same advantages as the AcrylaGel acrylamide solution. However, any powdered crosslinking reagent can also be used.

- Deionised and filtered
- Aldehyde free and acrylic acid free
- Ultra pure
- Easy to use
- Deionised and prefiltered
- Forms crystal clear gels
- Stable for 24 months when stored tightly capped in a dark area at room temperature

Code	Alt Ref	Pack	Price
NAT1116	EC810450ML	450mL	£66.00
NAT1118	EC8101L	1L	£112.00

National Diagnostics AccuGel

**national
diagnostics**

A stabilised, ready to use solution of 30% or 40% (w/v) premixed Acrylamide:Bisacrylamide Solution. AccuGel 19:1 contains 19g of acrylamide per gram of bisacrylamide; AccuGel 29:1 contains 29g of acrylamide per gram bisacrylamide. AccuGel 19:1 ratio is intended for the denaturing electrophoresis of DNA and AccuGel 29:1 is intended for native DNA electrophoresis and SDS-PAGE of proteins.

- Zero acrylic acid content, eliminating the fixed charges that cause band streaking.
- Oxidation products such as aldehydes have been removed by a selective adsorption process
- Reduce exposure to neurotoxic acrylamide dust by eliminating the need for handling and weighing solid acrylamide and methylene bisacrylamide
- Stable for 24 months when stored tightly capped in a dark area at room temperature

National Diagnostics Tris-Glycine-SDS PAGE Buffer

**national
diagnostics**

Tris-Glycine-SDS PAGE buffer (10X) is a concentrated solution of Tris-Glycine-SDS in distilled/deionised water, especially intended for use as the running buffer in SDS-PAGE of proteins. Each bottle of Tris-Glycine-SDS PAGE buffer (10X) contains 0.25M tris base, 1.92M glycine, and 1% (w/v) SDS.

- More economical than benchtop made buffers
- 18MΩ water
- 0.2µm filtered
- Saves time and improves results
