SLS Partners with Seward

Seward Ltd has teamed up with Scientific Laboratory Supplies (SLS) as its primary distribution partner for the Interprep range of instantly soluble sterile media bags or sachets. These simplify the media and sample preparation steps for microbiological analysis of food samples into one single process.

By working closely with media experts HiMedia Laboratories, Seward developed the Interprep range to help laboratories cut waste, increase capacity and respond to varying workflow requirements. Manufactured to ISO standards, Interprep has been tested and proven independently by the world renowned Leatherhead Food Research Agency.

Lee Jenkins, Supply Development Manager at SLS, says: "UK food testing laboratories are under constant pressure to reduce costs, reduce contamination risks and ease laboratory workflow. SLS is committed to finding solutions that help our customers achieve this; Seward's Interprep range can provide our customers with real benefits to alleviate workflow pressures while maintaining performance requirements." Dan Crothers, Managing Director of Seward, concludes: "As the largest independent British-owned supplier of scientific equipment, we are delighted to be working with SLS to bring Interprep sterile media to the UK market. Not only does Interprep minimise waste by having just the right amount of sterile media required for each sample, but it also eliminates contamination risk, weighing errors and laboratory bottlenecks often caused by batch media preparation. Interprep sterile media gives laboratories the flexibility to respond to today's workflow challenges."
