INSTRUCTION FOR USE

Hygiene Sponge In Container

Samples should be kept cool until testing is performed.

STEP 1

Identify the site to be sampled. It is recommended to use a template for accurate results where possible (TS/15-T).

STEP 2

Unscrew the container cap and carefully remove the glove attempting not to touch the sponge or outer surface of glove fingers with bare skin.

STEP 3

Whilst wearing the glove, grip the sponge in the container and remove.

STEP 4

Use the sponge to collect the sample over the desired (or measured) area.

STEP 5

Place the sponge back in the container and screw the cap back on tight.

STEP 6

Store at $4 - 8^{\circ}$ C (or cool & dry as possible) and send to the laboratory within 24 hours for analysis.

Have you considered? Sterile Sampling Sponge - TS/15-B
