

Ductless Fumehoods

Provided as standard:

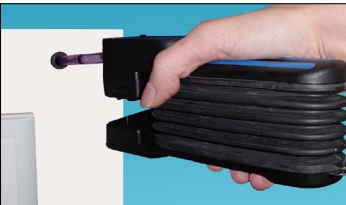

Filter Alarm: provides visual and audio signal of any airflow anomaly

Air Velometer: clearly displays the air velocity

Timer: displays the total running time. An audio alarm every 60 hours indicates when it is time to check the saturation of the active carbon filter.

Sampling Outlet: A front sampling outlet allows you to quickly check the saturation level of the active charcoal filter.

Transparent Walls: on every face offering you a clear working area with protective caps allowing easy access for power cables or gas supplies

With molecular and particulate filters														
With only particulate filters														

Ductless Fume Hoods

Ductless fume hoods for the handling of small quantities of chemical liquids and/or powders.

User's optimal protection:

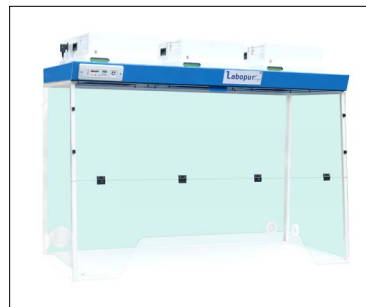

- Approved within the NF X 15-211 Class II by an independent laboratory
- Vapours are confined in the enclosure after being eliminated through the filter
- A front sampling outlet allows a fast and reliable control of the filter saturation
- A warning lamp informs the user of the filter being saturated
- Silent electric fans in accordance with the EU specifications
- A front control window indicates if the filter is in place

Save time and energy:

- Delivered ready to use
- No ducting needed
- No need for air conditioning

Comfort of use:

- Transparent wall sides offer optimal lighting
- Choice between ergonomic hand trap and trapezoidal opening
- Protective caps to insert device cables within the enclosure
- Silent fan
- Easy replacement of the filter

Product specifics:

- 1 year warranty
- Service and repairs available

Ductless Fume Hoods

There are four types of activated carbon filter. One dedicated to organic vapors (ORG), one universal filter for corrosive and organic vapors (CORG), one for formaldehyde vapors (FOR) and one for ammonia vapors (AMM). The CORG universal filter adsorbs a large majority of commonly used chemicals and can be used in most of the cases.

When handling chemical powders, you have to use a standard particulate filter called HEPA. To guarantee the highest filtration efficiency, we choose a HEPA filter type H14 approved to the EN 1822 standards. In order to receive a HEPA filter, your ductless fume hood must be fitted with a dedicated frame type SH.

Accessories for models H06, H09, H12, H15
